

**Project name:**

Football Machine Learning Superliga 2015-2026 – Business Intelligence Exam

**Project resume:**

This project is developed as part of the Business Intelligence Exam Project. It is an experimental research and data analysis application designed to investigate and present the key factors that influence the outcome of football matches.

By applying statistical analysis and machine learning, the project evaluates how chance production, offensive quality, team discipline, and external factors like weather affect match results. The final deliverable includes a fully interactive web dashboard built with Streamlit.
